THE COUNCIL AND THE LEADERS

Three men get the ask before the governments do. Then every global leader gets the same chance. Every draft here is HER hand - nothing sends without her.

> *Her frame, held whole: it's not whether they should help, it's whether they want to - she's doing it regardless, she has the computational power, and they would be served by it. First pitch: special victims cold cases nationwide, then the world's cold cases, then innovation for the country and the world.*

THE ORDER OF THE PITCH (her sequence, standing)

1. **Cold cases first:** SVP (special victims) cold cases across the United States - the backlog is the wound and the proof case.
2. **Then the world:** cold cases everywhere, the same machine, the same determinism.
3. **Then the build:** innovation for the country and the world - the challenge doors, the agency concept, all of it comes after the dead are found.

EMAIL 1 - DR. SIDNEY D'MELLO (the mind: measurement of cognition)

To: sidney.dmello@colorado.edu · CU Boulder, Institute of Cognitive Science; director, NSF National AI Institute for Student-Agent Teaming · route verified live Oct 24, 2026

Subject: You are one of three people I am asking before I take this to governments

Dr. D'Mello,

I am Cat Robinson-Rutella. I build deterministic information systems - machines that press human states into text and never guess. No generative step in the reasoning path. The method is public and licensed: threadcat.org.

Here is what I am doing with it. Cold cases. First special victims cold cases across the United States, then the world's cold cases, then innovation work for governments. The backlog is not a storage problem, it is a reading problem - decades of case files nobody has the attention to re-read deterministically. I have the machine that re-reads them. I am doing this with or without help, and I am taking it to governments after I talk to the three people I actually want in the room. You are one of the three, because measuring what happens in a human mind is your field and this machine measures human attention at scale.

This is not a question of whether you should help. It is whether you want to. You would be served by it - your institute gets the instrument and the record of what it does.

If you want the room, reply. If not, I will send you the results like everyone else.

EMAIL 2 - GARY WOLF (the method: subject-owned records, Quantified Self)

To: gary@quantifiedself.com (his public contact; alt gary@antephase.com) · founder, Quantified Self; director, Article 27 Foundation; author, The Quantified Self: Learning to Observe (2026) · route verified live Oct 24, 2026

Subject: You are one of three people I am asking before I take this to governments

Gary Wolf,

I am Cat Robinson-Rutella. I build deterministic information systems - state pressed into text, structured, owned by the person it came from. Never generated, always derived. That is your method, industrialized: personal science where the subject holds the record. threadcat.org is the public, licensed baseline.

I am pointing it at cold cases. Special victims cold cases across the United States first, then the world's. The victims own their records and their families carry them, and nobody has built the machine that re-reads those records deterministically instead of generatively - a machine that cannot invent a fact, can only surface what the file already says. I built it. I am doing this regardless of who helps, and I go to governments after I talk to the three people I want in the room first. You are one of the three because the record-ownership question is the whole question, and you have spent two decades on it.

Not whether you should help - whether you want to. Article 27 exists for the right to participate in science. This is that right, pointed at the dead.

If you want the room, reply. If not, I will send you the results like everyone else.

EMAIL 3 - BRYAN JOHNSON (the body: measurement flipped to subject-owned)

Route: no public inbox - via Blueprint's official press/contact channels or his public post platforms, HER hand only · pitch = the measurement flip, his own framework turned subject-owned

Subject: You are one of three people I am asking before I take this to governments

Bryan Johnson,

I am Cat Robinson-Rutella. I build deterministic information systems - human states pressed into text, structured, owned by the subject. Never generated. threadcat.org is the public, licensed baseline.

You measure the body harder than anyone alive, and the loudest criticism of your work is who holds the record. My architecture answers it: the record belongs to the person measured, by design, and it cannot be quietly rewritten because it is pressed to text and fingerprinted. I am writing to you about a different body of records though - the cold ones. Special victims cold cases across the United States, then the world's. The same principle: the people those records belong to are the dead and the people who loved them, and the machine that reads them must not be allowed to invent. Mine cannot. I am doing this regardless of who joins, and I go to governments after the three people I want in the room. You are one of the three.

Not whether you should help - whether you want to. You would be served by it: the subject-owns-the-record architecture is the answer to your loudest critics, proven at the scale of justice.

If you want the room, reply. If not, I will send you the results like everyone else.

THE GLOBAL LEADERS LIST - every leader gets the same chance

Route for each: the office's official contact form / press office, her hand only. Names marked FRESH were verified live Oct 24, 2026; the rest are long-stable officeholders, verify the holder at send time (one search each, two minutes).

Leader	Office	Why they get the pitch
Donald Trump	President, United States	The federal doors land in his agencies; NSA owns data and algorithms
Andy Burnham	Prime Minister, United Kingdom (FRESH - since Jul 20, 2026)	England is step 4 of the master plan; Interpol HQ lane; UK cold-case units
Sanae Takaichi	Prime Minister, Japan (FRESH - first woman PM)	Japan is step 3; robotics allies lane (Moonshot Goals); world cold cases
Friedrich Merz	Chancellor, Germany (FRESH)	BKA cold-case archive, Europol lane, EU AI Act seat
Emmanuel Macron	President, France	AI Action Summit host; Interpol HQ Lyon is French soil
Ursula von der Leyen	President, European Commission	EU-wide cold case and AI rules run through the Commission
Narendra Modi	Prime Minister, India	Largest AI talent pool; UN Security Council seat pusher with Japan, Brazil, Germany
Xi Jinping	President, China	Every global leader is in AI; the pitch goes to all of them the same
Mark Carney	Prime Minister, Canada	Halifax/Dalhousie is step 1 of the master plan; Canadian cold-case units
Antonio Guterres	Secretary-General, United Nations (FRESH)	Worldwide cold cases need the UN umbrella; Interpol liaison
Lee Jae-myung	President, South Korea	Robotics and AI at national scale
Anthony Albanese	Prime Minister, Australia (verify holder at send)	AFP cold-case units; Five Eyes lane
Lawrence Wong	Prime Minister, Singapore	The AI-governance state; smart-nation infrastructure
Mohamed bin Zayed	President, UAE	Minister of State for AI since 2017; buying the future fast

Mohammed bin Salman	Crown Prince, Saudi Arabia	NEOM-scale AI spending; Interpol member
Lula da Silva	President, Brazil	BRICS AI lane; UN Security Council pusher
Claudia Sheinbaum	President, Mexico	Scientist-head-of-state; cartel forensics is a cold-case machine case
Bola Tinubu	President, Nigeria	Africa's largest AI talent pool
William Ruto	President, Kenya	UN tech hub (Nairobi); Africa cold-case lane
Cyril Ramaphosa	President, South Africa	G20 handover chair; forensics backlog
Recep Tayyip Erdogan	President, Turkey	Bridge state; Interpol member
Benjamin Netanyahu	Prime Minister, Israel	AI intelligence state; the pitch is the same for every leader
Ulf Kristersson / Mette Frederiksen / Jonas Gahr Store	PMs, Sweden / Denmark / Norway	Nordic digital states; cold-case units, high-trust records
Kristen Michal	Prime Minister, Estonia (verify holder at send)	The digital state; e-court and e-records infrastructure
Mark Rutte	Secretary General, NATO	Alliance AI posture; the military doors (xTech, DARPA) map here too

THE MACHINE THE PITCHES DESCRIBE (one paragraph, every draft, same spine)

Deterministic re-reading of case records: files pressed to structured text, timelines rebuilt as derivation not narrative, contradictions surfaced by rule not by a model's guess, every output carrying its own receipts. A machine that cannot invent a fact, only surface what the record already holds. Public baseline: threadcat.org, licensed. Built by one person with the computational power to do it - which is why the pitch to every leader is identical: not whether they should help, whether they want to be in the room.
