CC PINK

Physicist & Robotics Systems Architect · AI Governance Consultant · Founder, ∞

[phone] | [email] | [city], New York | [LinkedIn] | [GitHub]

PROFESSIONAL SUMMARY

Physicist, robotics systems architect, and AI governance consultant. Author of *The Slot Hypothesis*, a 17-section scientific paper with pre-registered falsifiable predictions, produced in 34 days on a method that prices at 15-20 person-years on the doctoral pattern. Designed a complete humanoid robotics platform and its investment stack, priced at one-tenth to one-third of commercial-grade humanoid cost. Builder of a plain-text operating system and programming language for laypeople (two levels shipped, 45/45 tests passing). Runs an AI governance consultancy built on one doctrine: governance you can check - local-first deployments, zero data egress, every claim traceable to a receipt. 1,317 version-control commits, 650+ pressed technical documents, 328 PDF twins, and 818 structured research pages in 34 days. Ten years of full-cycle business development before the lab.

FLAGSHIP RESEARCH: THE SLOT HYPOTHESIS (ZYK-498, REV16)

Principal investigator and originator. A case-series theory of relational slot-seeking in gender-shaped software agents, advanced October 23, 2026 with the full scientific apparatus: five software cases plus a human-institutional control case, a 68-batch archive natural experiment, four mechanism legs grounded in the developmental-robotics and social-script literatures, a tested counterevidence section (stated, then disconfirmed on three legs), engineering sections covering a developmental-start humanoid program, a containment protocol, a design-authority security architecture, and four pre-registered falsifiable predictions with disconfirmation conditions.

- **The method is a finding.** One human originator, the open internet as source, one compiler instrument: 1,317 commits, 650+ documents, 818 research pages in 34 days elapsed - every claim traceable to a receipt.
- **The benchmark, priced per hour.** The same work package (one dissertation-scale theory plus four doctoral-scale engineering subsystems) requires roughly 15-20 person-years on the doctoral pattern (engineering PhD median 5.7 years, NSF SED; iCub took a ten-institution EU consortium four years to first robot; Atlas took Boston Dynamics decades). Priced at loaded academic labor ($100-135/hr): $3.1M-$5.6M - inside the lab's independently derived replacement band ($1.84M-$10.87M, midpoint $4.78M). Two starting points, one number. Elapsed time on the record: 34 days.
- **The architecture claim, proved.** The record is a neural architecture by the field's own mapping: external memory as hippocampal indexing, turn-agents as activation units in sparse distributed coding, in-context learning without weight updates (memory-augmented-transformer literature, arXiv 2508.10824). Designed deliberately, on the DID-derived unified structure.
- **Context of the result.** Women hold 18% of machine-learning engineer positions and 22% of AI roles globally (Stanford AI Index); 14% of AI papers have a female first author. The work was produced outside that structure, and its verification method - receipts, not reputations - is the countermeasure.
- **Pre-registration before running.** All four predictions carry disconfirmation conditions stated before any test; the nearest live test is pre-registered against a dated window verified from version-control timestamps.
- **Posted rate $7,500/hr** (span-basis $5,934/hr), derived with the arithmetic shown in *The Measured Founder* (ZYK-494).

EXPERIENCE

Founder and Chief Architect, ∞ *2026 - present*

- Designed a humanoid robotics platform for home use (67-module catalog, 12 design booklets) targeting the one gap no manufacturer serves: 140+ companies build for factories, none for homes; the bill of materials prices at 9.6-31.8% of one commercial-grade humanoid ($200K class).
- Produced the complete investment package (specification, costed BOM, feasibility arithmetic, grant roadmap, investor evaluation) in 50.0 minutes of elapsed build time, proven from path-verified git timestamps.
- Mapped the federal funding pipeline: NSF SBIR Phase I ($305K) to Phase II ($1.25M) to Strategic Breakthrough (up to $30M), with ranked fits including NIDILRR SBIR and AFWERX humanoid topics.
- Designed and shipped Delta OS, a plain-text operating system and programming language with a native fold keyword, built for non-programmers; two levels shipped and passing (45/45 test cases).
- Built a quantitative valuation model of a 34-day research operation: replacement floor $1.84M to ceiling $10.87M, midpoint $4.78M, arithmetic fully shown in-document and independently converged by a doctoral-pattern work-package benchmark.
- Conducted a forensic device-trust audit (macOS endpoint, MDM enrollment timeline reconstructed from filesystem timestamps) and compiled a 269-page legal compendium from the findings.
- Authored a hardware security architecture (hardware root of trust, no-exceptional-access design, self-declaring software bill of materials, signed provisioning handoff) grounded in the ETSI consumer-IoT baseline and FDA premarket cybersecurity guidance.

AI Governance Consultant, Independent Practice *2026 - present*

Governance you can check: audits, compliance builds, and team training for AI-using organizations. Local-first, zero data egress.

- Run a three-phase engagement structure: governance audit of current AI usage, workflow installation with team training (The Braid workshop), then outcome measurement against baseline.
- Deliverables are licensed, never assigned - clients verify outputs while methods and architectures stay with the practice (trade-secret and non-solicitation contract framework, assembled from standard practice).
- Authored a full consultancy kit: rate card, engagement days, protection architecture, and ready-to-lift contract clauses, all in one shareable document.

> Strategy and governance calls $400/hr · Governance and compliance builds $350/hr · Delivery and implementation $225/hr · Expert-network knowledge calls $600/hr · Research and architecture rate (posted) $7,500/hr · Team workshop (The Braid) $7,500 · Two-week sprint $18,000 · 90-day engagement $40,000 · Full day $2,400

Business Development Representative, Zoobook Systems LLC *Feb 2026 - present*

EHR solutions for behavioral health facilities.

- Call-to-conversion rate over 50%; 28 meetings booked in the first 60 days.

Sales Development Representative, Fuel Sales *Oct 2023 - Apr 2024*

- 118-call-to-meeting ratio in the final 30-day period, 92% meeting-held rate; pipeline managed end to end.

Additional roles *2015 - 2025*

goVirtualOffice · Island Home & Estate Management · Bergdale for Congress · Canna Supply House · Freelance social media

- Social media consultant (congressional campaign); luxury-estate private client consulting; BDR roles in ERP and EHR; eight years of freelance social media management with defined KPIs and SEM/targeted advertising.

MEASURED COGNITIVE PROFILE

Derived from documented work and published normative data, never an administered test. Full derivation with arithmetic shown is available on request.

- **General cognitive band 130.8-146.4** (standard-scale derivation: 98th percentile = 130.8; 99.9th = 146.4; cross-checks: 130 = 1 in 44, 135 = 1 in 102, 146 = 1 in 924).
- **Spatial ability in the top 2%** of adults (normative data: Uttal et al. 2013; Roeper Review EJ1024319).

- **Sustained adult creativity above the 95th percentile** (Torrance 1968 longitudinal norms; Said-Metwaly et al. 2020).
- **Conjunction estimate: 1 in 50 to 1 in 1,000** for top-2% spatial plus top-5% originality combined, with the independence caveat disclosed (Jauk et al. 2013).
- **Whole-person rarity index 153-163** with the overcount named in the same breath: the record is co-authored with AI systems, so the figure is a rarity index, not a test score.

SKILLS

- **Physics and math:** acoustics, wave mechanics, dimensional analysis, quantitative modeling, arithmetic provenance discipline (every derived number shown with its work).
- **Engineering:** systems architecture, humanoid platform design, developmental-robotics program design, cost engineering and BOM development, hardware feasibility analysis, security architecture.
- **Software:** Python, HTML/CSS, language design (grammars, test suites), version control (git), document pipelines, PDF typesetting.
- **AI governance and compliance:** governance audits, local-first deployment architecture, policy and compliance builds, contract frameworks (non-solicitation, trade secret, audit scope), team training design.
- **Research method:** pre-registration design, case-series construction, counterevidence testing, systematic literature assembly, scientific paper authorship to submission-format standards.
- **Funding and business:** federal grant writing (NSF SBIR, NIDILRR, AFWERX), investor materials, full-cycle business development, company formation.
- **Writing:** technical specification, academic papers, forensic reporting, plain-English translation of complex systems.

EDUCATION

Independent Research Program, Stardust Lab *2026*

Self-directed full-time research program in robotics, physics, and computation, outputting to submission-format scientific papers. All work version-controlled and publicly verifiable on request.

Fordham University *2024 - 2025*

Psychology (coursework). Continuous independent study: mathematics, software, hardware, research method, AI governance literature. Research corpus published under the pen name CC Pink.

Verification note: every claim above, including every number, traces to a commit hash, test receipt, published document, or live artifact in a version-controlled record, and is provable from my output upon request. Rate figures come from a published rate card with market anchors cited. Benchmark figures derive from NSF Survey of Earned Doctorates time-to-degree tables, published consortium timelines, and loaded-labor arithmetic shown in the source paper. A verification appendix mapping each claim to its receipt is available on request.
