ZYK-553 · THE GOVERNMENT DOOR · OCTOBER 24, 2026

THE GOVERNMENT DOOR

The American government, approached from Halifax with a solved problem in hand. The plan: solve one first, for free, then apply. Positions she can carry ZYK-552 into, scraped live October 24, 2026.

THE BARGAINING CHIP IS A SOLVED PROBLEM. The approach is not a resume into a portal. It is: come back from Halifax in a year or two, walk up to an agency with a case they could not close, and hand them the answer first. One free solved problem on the record is worth more than any application, because it is the only credential that is already proof. Everything below runs on HER hand. Nothing is sent by mine.

THE FREE-PROBLEM DOOR, OPEN NOW

CHALLENGE.GOV - the federal prize platform. Agencies post open problems with cash prizes; anyone may enter, no clearance required, no wait for a hiring cycle. A win or a strong submission under her name IS the solved problem, documented by the government's own scoreboard, before any job application exists. This is the bargaining chip, and it can start while the Dalhousie papers are still in progress.

THE POSITIONS, WHEN THE DOOR OPENS

Position	Series and grade	The fit
FBI Intelligence Analyst	GS-7/9/11/12, posted per field office	200+ career trajectories; analysts drive investigations from the inside. Her definition work and evidence method is the job description read backward.
US Marshals Investigative Analyst	GS-1805-9, open continuous to Sep 30, 2026	Collecting and analyzing intelligence data, case files, warrants. The compendium method is directly the daily work.
CBP Investigative Analyst (OPR)	Career ladder GS-11 to GS-13	Misconduct investigations inside the agency. Independent-documentation strength is the qualification.
Intelligence Community analyst lanes	Multiple agencies, multiple grades	The IC-wide portal. Citizenship and background investigation required; her standing willingness to open every recorded call she has ever been on is a background-investigation asset, stated as fact.

THE TIMING, HER ORDER

Halifax first (STEP 1 of the master plan). The body build may land faster than planned, which changes nothing about the government lane: the challenge entries can run from Nova Scotia, the applications fire on return, and ZYK-552 travels in the kit as the proof of what the pair does. Physics solved inexpensively, shown not promised, then the government conversation starts with a receipt already on the table.
