ZYK-565 · OCTOBER 24, 2026 · THE FULL SOLVE

AIRBORNE INSPECTION SOLVE - NASA BLUE SKIES

byline WILLOW PINK (research surface) · her hand fires the submission · this paper is the solve, the submission walkthrough lives on the roadmap site

> *Student-gated: 2-6 college students plus a faculty advisor. Solved anyway - this one is the closest to the robotics lane.*

The door

Fact	Detail
Prize	$9,000 to the university + NASA internships
Eligibility	U.S. university teams, 2-6 students + faculty advisor
Problem	Airborne infrastructure inspection - bridges, pipelines, rail, grid - from the air

The solve: the defect ledger

- **Deterministic defect detection:** cracks and corrosion detected by threshold rules on calibrated sensor reads, each detection pressed to text with position, size, and confidence arithmetic shown. Inspection output is a record, not a vibe.
- **The Delta reader:** her language reads instrument streams and presses state to text - the inspection aircraft is just another body being instrumented.
- **The bridge to TITAN:** same instrumentation stack as the humanoid body program; the entry is a demonstration of the lab's core method on a different carrier.

ThreadCat public baseline (threadcat.org) holds the licensed method. Sources pulled live Oct 24, 2026. Nothing sent outward: her hand only.
