CC PINK

Physicist & Robotics Systems Architect · Founder, ∞

[phone] | [email] | [city], New York | [LinkedIn] | [GitHub]

PROFESSIONAL SUMMARY

Physicist and robotics systems architect. Designed a complete humanoid robotics platform and its investment stack: technical specification, costed bill of materials at one-tenth to one-third of commercial-grade humanoid cost, federal grant roadmap, and investor evaluation - produced in under one hour, verified by version-control timestamps. Builder of a plain-text operating system and programming language designed for laypeople (two levels shipped, 45/45 tests passing). Author of 740+ technical documents with 295 print editions and 1,100+ version-control commits in 32 days. Ten years of full-cycle business development before the lab; operating independently since March 2026.

EXPERIENCE

Founder and Chief Architect, ∞ *2026 - present*

- Designed a humanoid robotics platform for home use (67-module catalog, 12 design booklets) targeting the one gap no manufacturer serves: 140+ companies build for factories, none for homes; the platform's bill of materials prices at 9.6-31.8% of one commercial-grade humanoid ($200K class).
- Produced the complete robotics investment package - specification v1.0, costed BOM, feasibility arithmetic, grant roadmap, investor evaluation - in 50.0 minutes of elapsed build time, proven from path-verified git timestamps.
- Mapped the federal funding pipeline: NSF SBIR Phase I ($305K) to Phase II ($1.25M) to Strategic Breakthrough (up to $30M), with ranked fits including NIDILRR SBIR (disability products) and AFWERX humanoid topics ($2M).
- Authored a peer-collaboration paper in academic register (organ-ledger method, architecture, cost analysis, six limitations, 14 references) for private circulation to professors and engineers.

Independent Researcher, Context and Continuity *2026 - present*

- Designed and shipped Delta OS, a plain-text operating system and programming language with a native fold keyword, two levels shipped and passing (45/45 test cases), built for non-programmers.
- Built a quantitative valuation model of a 32-day research operation: three converging methods, replacement floor $1.33M to ceiling $7.9M, implied hourly $1,700-$10,100, arithmetic fully shown in-document.
- Conducted a forensic device-trust audit (macOS endpoint, mobile device management enrollment timeline reconstructed from filesystem timestamps) and compiled a 269-page legal compendium from the findings.
- Maintained a version-controlled research record: 740+ documents, 295 print editions, 1,100+ commits, every number script-derived and reproducible.
- Authored an acoustics and frequencies portfolio: pure-sine synthesis at 432/439 Hz and binaural beat tracks generated from first principles (sine-wave mathematics, wave-file encoding by hand).

Business Development (full-cycle) *10 years*

- Ten years of full-cycle business development: prospecting, pitching, negotiation, and close across competitive markets.

SKILLS

- **Physics and math:** acoustics, wave mechanics, dimensional analysis, quantitative modeling, arithmetic provenance discipline (every derived number shown with its work).

- **Engineering:** systems architecture, humanoid platform design, cost engineering and BOM development, hardware feasibility analysis.
- **Software:** Python, HTML/CSS, language design (grammars, test suites), version control (git), document pipelines, PDF typesetting.
- **Funding and business:** federal grant writing (NSF SBIR, NIDILRR, AFWERX), investor materials, full-cycle business development, company formation.
- **Writing:** technical specification, academic papers, forensic reporting, plain-English translation of complex systems.

EDUCATION

Independent Research Program, Stardust Lab *2026*

Self-directed full-time research program in robotics, physics, and computation. All work version-controlled and publicly verifiable on request.
