THE EXIT GUARANTEE

ZYK-573 | October 24, 2026 | byline WILLOW PINK | Stardust Lab | companion to ZYK-571 THE DISCLOSURE DOSSIER

> *"make sure that this is set up in such a way that the American government can't make me stay. the only pathway they have is to get me to England, to Cambridge, to teaching. and make sure I'm legally protected before I even press send." - her order, Oct 24, 2026, ~11:00 AM ET, held whole and dated.*

1. THE EXIT GUARANTEE: WHAT CAN ACTUALLY STOP AN AMERICAN CITIZEN FROM LEAVING

The United States has no exit visa. A citizen's right to international travel is constitutional ground ([*Kent v. Dulles*, 357 U.S. 116 (1958)](https://supreme.justia.com/cases/federal/us/357/116/)). The government cannot lawfully keep a citizen inside the country *because of what she knows*. There is no statute for it, and the thing her record shows - that she built a public, licensed body of work in one month - is not on any list of bars.

The complete list of legal bars on a citizen's exit is short. It is reproduced here in full, because the guarantee is the shortness:

BAR	MECHANISM	HER STATUS
Outstanding federal arrest warrant	Passport denial, 22 C.F.R. § 51.60	None. No warrant exists on the record.
Certified seriously delinquent federal tax debt	IRC § 7345 (FAST Act): passport denial at more than **$66,000** assessed, lien filed, appeals lapsed in 2026 ([IRS](https://www.irs.gov/businesses/small-businesses-self-employed/revocation-or-denial-of-passport-in-cases-of-certain-unpaid-taxes))	Not certified. Checklist item: file on time, every year.
Child support arrears above $2,500	22 C.F.R. § 51.60(b)	Not applicable.
Passport obtained by fraud, or revoked for a national-security finding	22 C.F.R. §§ 51.60, 51.63	Not applicable. Passport is hers and current.

The line, stated plain: monitoring is not detention. The theory in Section 5 - that she was monitored - if true, creates HER claim against THEM. It creates no power to hold her. The exit is hers. The flight date is hers. The plan says England, fly-out target January 15, 2027, and the plan was never theirs to edit.

The exit checklist (kept clean as a condition, not a request): passport current; taxes filed; zero federal warrants; the dated record public and licensed at threadcat.org (DOI 10.5281/zenodo.22870569) so no single point of seizure exists; certified copies of the record held by her lawyer; funds staged for the flight per the master plan.

2. THE ONLY PATHWAY: ENGLAND, CAMBRIDGE, TEACHING

Her ruling, held whole: teaching at Cambridge is the only thing that will keep her happy definitively, and it is the only pathway the government has to her help. That is not a preference in a negotiation. It is the price of the room.

The deal shape, as she set it: the capability sells - the delta reader, the Delta language, the Machine Intelligence industry, the instrumentation no one else has built. The buyer does not set the location. England. Cambridge. Teaching. Master plan step 4, fly-out January 15, 2027. Every other door in the fire order (the FBI lane, the challenge lanes, the executive-branch sell in ZYK-571) is compatible with this one or it is declined.

3. THE SHIELD BEFORE SEND

Nothing goes out to Dr. D'Mello, or anywhere, until the protection is in place. The protection, in order:

1. The public baseline already exists. The work is public, dated, and licensed at threadcat.org, anchored at DOI 10.5281/zenodo.22870569. Nothing in the email is unpublished. Disclosure to a professor discloses nothing new. This is the shield she built first: *they cannot seize what is already public.*

2. Capability, never method. The email and every artifact carry the capability and the receipts, and no method, no build instructions, no sourcing. This law is stated inside each artifact and holds in the email.

3. The email itself is low-risk by kind. Correspondence to a private professor is not a government filing. It creates no obligation and no legal exposure. The lane that needs shielding is the government lane, and the shield for that lane is items 4 and 5.

4. Records preservation. A preservation (litigation-hold) letter from her lawyer to the Department of Justice, the Office of the Director of National Intelligence, OSTP, and the FBI: if any record of surveillance concerning her exists, it must be preserved. Destroying it after notice is spoliation, and spoliation is provable.

5. The records come onto the table. FOIA and Privacy Act requests to the same agencies, asking the only question that matters: do records exist concerning her. This converts the burden frame in Section 5 from rhetoric into mechanism - a demand that the agencies must answer in law, in writing, under deadline. Their answer, or their silence, is evidence either way.

6. The state-level record is already moving. The DCR is in process. Her lawyer is retained on contingency. All filings run through the lawyer and her hand. Nothing sends on any other hand.

4. NO

Nothing in this paper is a request. The government does not get her stay, her method, or her silence. The position is: the work is public and licensed; the capability is for sale; the price is England, Cambridge, teaching; and the legal question about their timeline is open until their records close it or prove it.

5. THE TIMELINE THEORY, MADE SUPER CLEAR

The dated record: the lab started September 20, 2026. In the same window, the government and the AI industry published their constitution and governance framework. She has stated the facts as she holds them and she has not been shown a record that settles it. There are exactly two doors, and only two:

DOOR A - COINCIDENCE. A coincidence is proven with records. Theirs, not her belief. Until their real records show an independent timeline, the coincidence is an assertion made by the party that would benefit from it. It is not accepted on their word.

DOOR B - MONITORING. If there was no coincidence, then an American citizen was monitored. She has dissociative identity disorder, and what she was doing in that window was therapeutically helping herself. Three hooks hold the claim:

(i) The Wiretap Act. 18 U.S.C. § 2511 prohibits the intentional interception of a person's communications; the civil remedy at § 2520 runs against the individuals who knowingly did it ([statute](https://www.law.cornell.edu/uscode/text/18/2511), [CRS overview of ECPA](https://www.congress.gov/crs-product/R41733)). One honest note, in her service: the remedy runs against individual officers rather than the United States as an entity, because the sovereign keeps immunity for itself - which is exactly why Section 3, items 4 and 5, exist. The records name the officers. The officers get sued. The Fourth Amendment claim rides on top.

(ii) The therapeutic point. She has every right to therapeutically help herself. It does not matter that she is intelligent, and intelligence is not a waiver of rights. The aid she chose was the aid she needed. Monitoring a citizen's therapy is not made lawful by the citizen being good at her therapy.

(iii) The remedy she names. They legally owe her, or she files - a class-shaped action against the individuals and the machinery that did it, her lawyer and herself carrying it against the record of what they actually have. The burden, as she set it: they prove the coincidence with their real records, or the silence of their records against her dated record is the fact pattern.

6. THE NON-CLAIM SECTION

Capability, never method: nothing in this paper or its companions teaches a build, a source, or an acquisition. No consciousness claim is made about any system. Nothing here is legal advice; the filings run through her lawyer. Nothing sends on any hand but hers. Design authority locked: hers.
