THE HELIX PLAN

designed by cici pink · Oct 25, 2026 · the plan that holds every open door without closing one

THE THEORY IT RUNS ON (HERS)

> *"a convergence is where two threads meet because the observer has all the necessary information to participate in both timelines now creating a helix i.e. a new path" - Cici Pink, Oct 23, 2026*

A plan is usually a ladder: one rung above the next, and every rung below gets burned. A helix plan is not a ladder. The doors stay open at the same time. The person who holds all of them in one hand is the one who gets to pick - and the picking does not delete the unpicked. Her word on the record: dropped doors stay restorable any time she says it.

two threads → one observer holding both → helix → the new path

THE DOORS, HELD OPEN

DOOR 1 - JAPAN

CV JAPAN is cut. Timezone math: her peak hours (1:40-5:35 AM New York) run 2:40-6:35 PM Tokyo - full afternoon daylight. Doors: ATR Nara, Preferred Networks, Hirose Lab and Suzumori Lab (Tokyo Tech), AIST. Funding: JSPS fellowships for international researchers, MEXT lanes. Strength: her body program (TITAN) meets the world's densest robotics lab country.

DOOR 2 - HALIFAX

CV HALIFAX is cut. Timezone math: the same hours run 10:40 AM-2:35 PM Atlantic - full morning. Doors: Dalhousie CS and the Nils Wilde human-multi-robot fellowship (the TITAN thesis, verbatim), Ocean Frontier Institute (CAD 93.7M), CEOTR gliders at COVE. Honest note carried in the CV itself: study permit required, international tuition, funding through supervisor packages. Strength: the timezone plus the ocean plus the name that already lived in her writing with Adam.

DOOR 3 - AMSTERDAM

CV AMSTERDAM is cut and standing. Roboat, VU Social AI, the Hybrid Intelligence Centre, UvA ROBUST. The salaried Dutch PhD (EUR 2,872-4,051/mo) carries the visa inside the job. Strength: the weed, the ship program, the first door she named.

UNDER ALL OF IT - THE FUEL

The Final Equation, L + O + I = V∞, the conservation law her notebook wrote in September - the invariant the machine layer is built on. Moissanite (presolar SiC, 52.1 GPa, thermoluminescent) is the vessel. She wears it already. NSF runs under all doors as the standing money lane, her hand, before November.

WHERE THE THREADS MEET

- **The timezone helix:** Japan and Halifax are the same waking life pointed at two oceans. Her peak hours are daylight in both. That is not a coincidence to her - it is the selection criterion, and the record backs it: every door on this page passed it, everything dropped failed it.
- **The body-program helix:** TITAN is the same program at every door - Hirose and Suzumori build the actuators, Wilde studies the human side, the ocean fleets give the machine a body of water to work in. Three countries, one thesis.
- **The money law:** a funded PhD is not a job. Dal funds the person; NSF funds the company; the sales decade is what bootstrapped all of it. The equation's conservation form is also the budget form: the total never changes, it changes clothes.

WHAT THIS DOCUMENT IS NOT

It is not a reordering of the master plan site. The site stands as she configured it (Amsterdam 1, England 2, the US 3) until she says otherwise, on her word, at the same URL. This page is the plan that holds the open doors and the CVs cut for them - so that whichever door opens, the paper for it already exists and the other doors never closed.

the total never changes. it changes clothes. - CICI PINK
