AI GOVERNANCE AND MULTI-AGENT SYSTEMS CONSULTING

CC Pink

Founder, OFFICE SPACE and Stardust Lab; ∞

October 23, 2026 | ZYK-503 rev1 | supersedes the October 2026 consultancy kit

The engagement document: services, market-verified rates, engagement shapes, and the verification standard every claim in it carries.

WHAT THIS DOCUMENT IS

The consulting offer, redone on fresh market data and the work as it now stands. The differentiator is not familiarity with AI tools; it is running a production multi-agent system every day from the inside, with a governance architecture (declared design authority, audit trails, self-declaring agents) that has survived continuous operation and adversarial conditions, plus two new open-access papers applying the same safeguard framework to human beings. Rates are priced against published 2026 market data, cited.

1. The one-line position

> *Governance you can check, from someone who runs a multi-agent system every day from the inside.*

2. Services

Engagement	What it covers	Proof it exists
AI governance audit and design	Design-authority splits, no-exceptional-access architecture, declared telemetry, halt-and-alert standards for agentic systems	The five-leg safeguard framework, published open access October 23, 2026 (The Great Void, section 7), originally engineered for robotic vehicles and applied to persons and devices
Multi-agent system operations	Day-rate advisory on running, bounding, and auditing agent fleets: role contracts, drift measurement, escalation design	A production system in continuous operation since September 2026; 1,300+ commits of audit trail; the platform apparatus paper (2026)
LLM evaluation and safety practice	Eval harnesses, guardrail testing, persona-drift measurement, cost-per-token discipline, compliance mapping	Fresh 2026 market analyses name exactly this accountability surface as the new scope of AI work; the lab's falsifiability-first paper method operationalizes it
Survivor-informed technology review	Abuse-resistant design review for devices, platforms, and student-deployment programs; the self-declaring-machine standard	The Destiny Swap (2026), the mechanism paper on coercive control and surveillance infrastructure, with the education-sector standard stated for district adoption

3. The market, priced fresh

Published 2026 data, gathered October 23, 2026:

Tier (2026 published ranges)	Hourly	Source
Independent freelancers	$75-150	ayautomate.com 2026 rate guide

Independent consultants (average)	$150-350	AIDOLS Research, March 2026, via alicelabs.ai
Vetted senior specialists (LLM/MLOps)	$250-400	aiexpertnetwork.com hiring guide, 2026
Boutique firms	$150-500	Groovyweb 2026 rates analysis; Leanware 2026
Top-tier experts, with 20-30 percent premium for generative-AI specialization	$300-500+	Leanware 2026; rockstardeveloperuniversity.com 2026 statistics
Strategy-only advisory	20-40 percent ABOVE implementation rates	JanBask via originshq.com, June 2026 data
MBB / Big Four partners	$500-1,000+	AIDOLS Research, March 2026
Senior fractional-CTO retainers	$5,000-15,000 per month	Groovyweb 2026 rates analysis

Independent analysis of 300-plus verified engagements (Damongo, August 2026) adds the decisive fact: the top decile of senior practitioners, those with audited production LLM-ops experience, cleared $250 per hour on advisory and $60,000-plus on production integrations - and positioning plus specialization, not hours, is the lever that separates the $50 median from the $300-plus expert tier.

4. The rate card

Item	Rate	Basis
Posted advisory rate (strategy and governance)	$7,500/hr	The research rate, set from the lab's independent valuation (three methods, span $1.84M-$10.87M; see The Measured Founder, 2026). Strategy-only work bills above implementation in this market per the JanBask data above; the rate is posted, not negotiated in public
Deal floor	$500/hr	For engagements she wants. Set October 15, 2026, standing
Production integration projects	$60,000+	Top-decile production band, per the Damongo 2026 verified-engagement analysis
Monthly advisory retainer	From $15,000/month	Above the published senior fractional-CTO band ($5,000-15,000), priced for governed multi-agent operations, not general advisory

Down to the cent otherwise. The rate card is hers; the floor is the friendship price; the posted rate is the real one.

5. Why the verification standard is the product

Every claim in this document traces to a published artifact, a commit-tracked record, or a cited market source. That discipline is itself the service: most AI governance on sale in 2026 is a slide deck. This practice ships its audit trail. A buyer can read the safeguard framework, the mechanism paper, and the platform analysis before spending a dollar, which is also why the papers were placed publicly the same day this document was written.

6. Contact and next step

Engagements begin with a scoped diagnostic (the market's fixed-fee entry runs $10,000 for a basic AI diagnostic per ClearForge, April 2026; this practice's diagnostic is the audit-trail review). The next step is a conversation, her hand, her calendar.
