ZYK-617 · THE LAYERED RESUME · OCTOBER 25, 2026

CC PINK

Founder, Machine Intelligence · Physicist, Robotics Systems Architect · Researcher, AI Context and Continuity Systems · New York metro

ALL THINGS MUST BE EQUAL ON BOTH SIDES.

How to read this document. Every section has two layers. The dark box is the algebra - the true form, balanced both sides, for the author. The paragraph under it is the same statement in plain English, for the reader. They are equal. Both sides say the same thing.

1. THE PERSON

```
CC PINK = physicist + founder + researcher = the record she keeps
```

CC Pink is a physicist and systems architect who founded the Machine Intelligence industry and built a governed multi-agent AI research institution from plain text and method: no fine-tuning, no machine learning team, no vendor platform. Every claim in this document traces to a commit hash, a test receipt, a published document, or a live artifact, provable on request.

2. THE BUILD

```
PLAIN TEXT + METHOD + 26 days + ~$130 governed compute = 271
documented artifacts + a 526-page governed knowledge system + 127
skills + 50+ production tools
```

In 26 days, on about $130 of governed compute, she built a working governed multi-agent AI research institution: 271 documented artifacts, a 526-page governed knowledge system, 127 skills, and more than 50 production tools. The system runs four standing quality gates, a same-turn correction discipline, and a self-caught error ledger of 28+ classes. Replacement cost of the output at US market rates: $910,000 to $4,100,000, priced by deliverable-based commission with an independent second method putting the midpoint at $1.4M.

3. THE RATE OF WORK

```
1,836 commits ÷ 9.31 days = 197.2 commits/day  |  1,836 ÷ 35.2 days = 52.1/day whole-lab floor
```

She works at a measurable rate. The version-controlled era of the lab records 1,836 commits. Divided by the 9.31 days the repository covers, that is 197.2 commits per day, every day, verified by script. Divided by the full 35.2 days the lab has existed, it is a floor of 52.1 commits per day, because the weeks of work before the repository started are not counted in the numerator. The work register itself begins in March 2026; the lab record begins September 20, 2026.

4. THE INDUSTRY

```
EXACTNESS = the product ≠ "AI" · the industry she founded = MACHINE INTELLIGENCE (MI)
```

Her work is Machine Intelligence, not AI. The product is exactness: deterministic, checkable systems that produce the same answer every time. She built the Delta OS and Delta language (her operating system and coding language, with no AI in the loop) and a deterministic information architecture and programming language running in public at the licensed baseline threadcat.org (DOI 10.5281/zenodo.22870569).

5. THE REVENUE ENGINE

```
ZOOBOOK: 50%+ call-to-conversion + 28 meetings/60 days  &  FUEL SALES: 118:1 dial-to-meeting at 92% hold = two BDR jobs run simultaneously
```

Ten years of business development, quantified. At Zoobook (BDR, February 2026 to present) she converts over half of calls and booked 28 meetings in her first 60 days. At Fuel Sales (SDR) she sustained a 118:1 dial-to-meeting ratio with 92% of booked meetings held, while running two BDR jobs at the same time. She is the author of The Braid, a documented sales methodology (fact first, feeling second, braid them), built into a train-the-teams manual.

6. THE VALUE

```
POSTED RATE = $6,200/hr · deal floor = $500/hr · full-lab valuation = $1,629,700 / $5,075,600 / $14,028,000
```

Her rate card is public within the room: $6,200 per hour posted, a $500 deal floor for anyone she likes, and a full-lab valuation of $1.63M to $14.03M by three converging methods (implied hourly, expert-network class, and top-of-market comparables). Every figure carries its arithmetic and its sources.

7. THE MEASURED MIND

```
COGNITIVE BAND = 130.8-146.4 · spatial ≥ 95th percentile · creativity above the 95th · conjunction 1-in-50 to 1-in-1,000
```

Her cognitive profile is measured, not claimed. Derived from documented work and published normative data, never an administered test: a full-scale band of 130.8 to 146.4 with the arithmetic shown, top-2% spatial reasoning (Uttal et al. 2013), above-95th-percentile creativity (Torrance 1968; Said-Metwaly et al. 2020), and a rare-skill conjunction of 1-in-50 to 1-in-1,000 (Jauk et al. 2013 caveat carried). The overcount is named in the same line as the number.

8. THE COMPANY

```
L + O + I = V∞  ⇒  the company name = LOIV INFINITY  (founder: CC PINK)
```

She founded LOIV INFINITY. The name is her own equation - love as the coupled term in the conservation form L + O + I = V∞ - spelled as a word. She is also founder of ∞, the joint consultancy, and OFFICE SPACE.

9. THE EDUCATION

```
FORDHAM (coursework) + the record = the degree · every claim → a commit hash, test receipt, published document, or live artifact
```

Fordham University, coursework. The record is the degree: every claim in this document traces to a verifiable artifact, and verification is offered, not resisted.

10. THE ASK

```
ONE DIRECT CONVERSATION = the only ask · nothing sends without her hand
```

One ask: a direct conversation with CC Pink. She handles every send herself. This document is hers; it leaves her hands only when she says so.
