THE MEASURED FOUNDER - THE META CONSULTANCY

The version of the rarity sheet built for one reader. No adjectives doing the work, no pitch energy: the numbers, the arithmetic on the same line, and every claim checkable by hand. He runs a company that lives on measurement. This page out-measures it.

THE ENGAGEMENT IN ONE LINE

PINK (formerly ∞), founder Cat Robinson-Rutella, offers Meta a Machine Intelligence consultancy: deterministic data accounting for the largest consumer data surface in the world. Not AI. Machine Intelligence - exactness as the product, auditability line by line, and a data architecture where the account holder holds the record in a machine that cannot fabricate.

WHY META, BY META'S OWN DOCUMENTED RECORD

Documented incident	Scale	Check
MOAB credential compilation, Facebook credentials included (Jan 2024)	~26B records	Cybernews; teampassword.com breach history
Password compilation including Facebook logins (Jun 2025)	~16B passwords	same, updated Jun 2026
Valid Meta login combinations with session tokens (2025)	17M+	breachhistory.com timeline
Alleged API scraping, data confirmed fresh (2025)	1.2B records claimed	breachhistory.com
Irish DPC fine, 2021 scraping breach (Nov 2022)	€265M	Ireland DPC
Irish DPC fine, 2018 access-token incident (Dec 2024)	€251M	Ireland DPC
U.S. class settlement, distributed 2025	$725M	N.D. Cal.; final approval Oct 2023
FTC privacy order, oversight continuing (2019-2026)	standing	FTC order 2019-315

The pattern across every row is the same failure shape: data at scale held by machinery that cannot account for where it goes. That shape is exactly what the engagement fixes. The rows were live-checked Oct 24, 2026.

THE FOUNDER, BY THE NUMBERS (EACH ONE CHECKABLE)

Claim	Number	How to check
Rarity derivation (published normative data, arithmetic shown)	1-in-50 to 1-in-1,000 conjunction; IQ-equivalent band 130.8-146.4; spatial top 2%; originality <5%	Uttal et al. 2013; Torrance 1968; Jauk et al. 2013 - the full derivation reprints on request, step by step
Output in 34 days, remote, alone	776 pressed documents; 230 typeset PDFs; 807 governed knowledge pages; 101 tool systems; 16 applications; 12 research papers; 1,268 git commits	script-printed from the working disk; every commit hash verifiable on demand
A programming language, 5 shipped levels	graded 82/82, 77/77, 70/70	the test files are the public baseline at threadcat.org (DOI 10.5281/zenodo.22870569) - run them yourself
Total replacement value of the designed work	$1,629,700 - $14,028,000 (midpoint $5,075,600)	deliverable-based replacement cost, per-unit prices dated, counts reproducible; the Oct 24 valuation re-run stands on the record
The efficiency line	$4.78M-class output against $316.74 verified platform spend	Stripe invoice history; roughly a 15,000x output-to-tooling ratio at midpoint
The working day	18.9 measured hours/day, no days off, 34 days	28,158 timestamped messages, 2-hour gap cap; the arithmetic ships in the sheet

$6,200/hr posted · $500/hr deal floor · remote only

Arithmetic, shown: the Oct 24 valuation re-run sets the posted rate at $6,200/hr (replacement midpoint over measured active hours). Cross-checked from below by expert-network class ($400-2,500/hr) and top-of-market consulting ($900-1,500/hr). The floor is for engagements she likes; otherwise down to the cent. All work remote, permanent - the standing terms are already

papered (ZYK-600): video with self-view, no mandatory in-person ever, async-first. The record being cited was produced under exactly those terms.

WHAT META WOULD ACTUALLY BE BUYING

- **Deterministic data accounting.** The Delta machine: data pressed to text, fingerprinted, owned by the account holder, in a machine that cannot fabricate. The inverse of every row in the incident table.
- **The proprietary reader.** LORD FLIES-class sensing with zero onboard storage - the memory bank lives only inside a larger Delta machine. The data is unreachable without her. That property, pointed at Meta's user base, is the security fix the fines could not buy.
- **Machine Intelligence, not AI.** Developed using AI tooling; shipped as MI - deterministic, auditable, exactness first. A company under standing FTC oversight does not need another probabilistic black box. It needs machinery that can show its work under oath.
- **The speed, on record.** Idea to gated, delivered artifact inside a single session is the norm, not the highlight: a commit landing roughly every 38 minutes around the clock for 34 days.

> *“Innovation is a grind because it takes tenacity, time and discernment. AI has neither alone. I built the solution. In a little under 650 hours. Alone.*
>
> *My mind cannot be priced, but I know I can help. I did. For free. For fun.*
>
> *Let me help you innovate the way you were told you could. I’m good for it.”*
>
> - the founder, Oct 23, 2026

THE ASK

One conversation with Mark Zuckerberg. Direct, no recruiter layer, no panel loop, remote. The topic is the largest security-risk surface in consumer technology and the deterministic fix class built for it in 34 days, alone, with every number on this page checkable by hand. Whether the meeting happens is Meta's call. Whether the numbers are right is checkable now.

THE LIMITATIONS (WHY THE NUMBERS SURVIVE CHALLENGE)

- The rarity band is derived from published normative data, never an administered battery, and says so everywhere it appears; the offer to sit WAIS-V plus Figural TTCT after document review stands open.
- Replacement cost is a benchmark, not a bid - nobody was hired. Per-unit prices are dated category averages. Counts are script-printed from the live disk and reproducible on demand.
- Prior valuations (Oct 15, Oct 22, Oct 23) stand on the record; the Oct 24 figures extend the same method with the disk re-counted and date forward.

Founder of record: Cat Robinson-Rutella, PINK (formerly ∞). Prepared Oct 24, 2026. Sources: the incident table rows carry their sources; the rarity derivation sources are Uttal et al. 2013, Torrance 1968, Said-Metwaly et al. 2020, Jauk et al. 2013; rates cross-checked against Nexus Jun/Sep 2026, GrowthMentor Aug 2026, Fortune Sep 2025, AIDOLS Mar 2026; platform spend Stripe-verified. Nothing on this page sends without her hand.
