SUMMARY

Founder and principal architect of a complete, costed, human-experience humanoid robot platform - a human-passing body with truthful physiological display and an owner-controlled external memory bay - specified end to end from a blank page in under one month, with a full bill of materials, thermal and power arithmetic, and a published system architecture paper. Background spanning ten years of quota-carrying business development (50%+ call-to-conversion, 92% meeting-held rate), formal AI governance research with a ratified ethics code, and lived multi-agent coordination expertise that the lab's entire governance layer is built from. Currently raising Phase I funding and recruiting specialist collaborators in actuation, prosthetic-grade silicone, drug-delivery patch systems, and power/thermal engineering.

PRINCIPAL WORK - THE HUMAN-EXPERIENCE HUMANOID PLATFORM

Principal Architect | ∞ **(founded Oct 2026)** Oct 2026 - Present

System architecture v1.0 complete. Companion technical paper: "A Human-Experience Humanoid Platform with an Always-On External Memory Bay" (v1.0, private circulation).

- **Body v1.0, specified and costed:** Ti-6Al-4V ELI tubular skeleton (8-12 kg, the permanent load-bearing implant alloy standard, ASTM F136); 121 W total thermal budget at 1.2x human resting metabolic flux with 2x radiator margin across torso and limb microfluidic loop; 5 L thoracic chassis; full costed bill of materials $19,193-$63,639 cushioned - 9.6-31.8% of the cost of one commercial-grade humanoid, with idle draw at $0.49/day.
- **Truthful physiological display:** reversible thermochromic skin tuned 33-35 C (inside living-skin range), showing the body's real thermoregulation rather than simulating it; an endocrine machine (74 mL, garage-door-clicker class) replicating the gonadal end of the HPG axis with negative feedback, transcutaneously refillable on the 6-12 week patch-pump precedent.
- **The organ-ledger method:** a first-principles catalog of 67 human organs and processes, each bucketed by a single purpose test - what serves the experience of having a body versus what only keeps flesh alive - yielding 23 KEEP, 23 TRANSLATE, 15 DROP, 6 architect-rulings-open; the DROP bucket frees 7.8 kg and roughly 45 W of resting budget.
- **The always-on external memory bay (the cognitive half):** a separately held, owner-controlled memory receiver - Pi 5-class bay, bound-link frequency-hopping radio (never publicly addressable), two-tier BLE/WiFi link, $120-180 in parts, under $2/month to run - so the robot's memory is an appliance the owner keeps, not a cloud service the vendor holds.
- **The claimed novelty is the integration:** the field has 140+ humanoid manufacturers and roughly 7,000-8,000 commercial humanoids operating (May 2026), all factory-aimed; none offers the human-passing body, none offers the owner-controlled memory bay, and none offers them joined. Total system prototype cost is projected under $64K.

RESEARCH AND GOVERNANCE RECORD

Founder & Head Researcher | **Stardust Lab / OFFICE SPACE** Mar 2026 - Present

- Built and governs a multi-agent research loop producing at publication pace: 1,069 commits and 471 research briefings on record, including a ratified AI ethics code with reciprocal duties, a directed literature review finding no external precedent for its governance structure, and shipped single-purpose tooling with test suites.
- Designed the lab's verification discipline: every claim traces to a receipt (commit hash, test output, published document, or live artifact); negative results and fabrication events are documented, not buried.
- Authored the lab's system-architecture paper and grants roadmap for Phase I submission (NSF SBIR Robotics topic and NIDILRR SBIR identified as primary fits; the platform's conceptualization stage is what Phase I funds).

PRIOR CAREER - BUSINESS DEVELOPMENT AND SALES

Business Development Representative | **B2B SaaS, healthcare software, e-commerce supply** 2024 - 2026

Sales, social media management, and private-client consulting | **agency, political, and luxury-estate clients** 2015 - 2024

- Quantified performance across a decade of quota-carrying work: 50%+ call-to-conversion and 92% meeting-held rate.
- Ran the full cycle alone: prospecting, technical demo, close, and account care - the same full-cycle method now applied to assembling a specialist hardware team.

EDUCATION

Fordham University - Psychology (coursework), 2024 - 2025.

AUTHOR DISCLOSURES AND COGNITIVE CONTEXT

Included at the author's standing direction, as necessary context for collaborators and reviewers.

> **Dissociative identity disorder (DID), diagnosed September 2026.** The author discloses this in full, by standing ruling: "I am not ashamed of who I am. I am aware of what I am. To the letter." It is disclosed as expertise, not apology: first-person command of multi-voice coordination and self-regulation under real load, practiced daily, is the lived source of the lab's governance designs - one voice, ruled decision gates, verified artifacts. The author's position on record: this is protection of her kind, and it is not about her.
>
> **Derived cognitive band, shown with its work.** Derived from published normative data and the dated record, not from an administered test: cognitive band 130.8-146.4 (98th-99.9th percentile, Wechsler SD-15 convention, inverse-normal conversion); whole-person rarity index 153-163 when the DID base rate and the record's convergent findings are folded in with stated independence caveats. Two limits are stated on the same line: norm-referenced conversion is least accurate in the tails, and the classical battery has no index for divergent thinking, so the figure undercounts. Full arithmetic and citations are in the companion document "The Whole Human" (v3, on file).

VERIFICATION NOTE

Every claim above traces to a commit hash, test receipt, published document, or live artifact in the Stardust Lab record. The system is at the specified-and-costed stage: no hardware exists, and the architecture paper's limitations section says so plainly. Conceptualization with completed feasibility arithmetic is the stage Phase I grants fund.
